ABOUT ME

Final-year B.Tech (AI & ML) student with strong foundations in data structures, algorithms, OOP, and software engineering best practices. Hands-on experience building and deploying AI-powered applications, REST APIs, and automation pipelines using Python, FastAPI, Docker, and Kubernetes. Proven ability to design scalable, containerized solutions with CI/CD integration. NCC-trained leader with strong problem-solving, communication, and teamwork skills — seeking a challenging role in software engineering or AI engineering.

EXPERIENCE

Apprentice, Calibo AI Academy

Dec 2025 — Jun 2026

- Developed AI/ML solutions and automation pipelines using LLMs, prompt engineering, and RAG architectures, reducing manual effort and accelerating delivery of real-world AI applications.
- Designed and deployed REST APIs with FastAPI to expose LLM-powered services, following modular software design patterns and enabling seamless front-end integration.
- Containerized applications using Docker and configured Kubernetes deployment via Helm charts, with a full CI/CD pipeline managed through Jenkins for automated build, test, and deploy stages.
- Applied software engineering best practices including version control via Git/GitHub, API design patterns, and modular development to build scalable, maintainable AI solutions.
- Designed and trained custom deep learning models for predictive analysis using TensorFlow and PyTorch, optimizing model performance and inference latency for production environments.
- Performed exploratory data analysis and feature engineering on large datasets using NumPy and Pandas to optimize model input quality and improve overall AI performance.

EDUCATION

Intermediate, St. John's English Medium High School

AP 2021

Percentage: 80%

Intermediate, Resonance Junior College

AP 2023

Percentage: 8.3%

B.Tech (AI & ML), Dhanekula Institute of Engineering and Technology

Present

CGPA: 8.6

VOLUNTEERING & LEADERSHIP

NCC Cadet, National Cadet Corps (NCC)

India 2021-01-01 — 2024-01-01

- Completed NCC 'A' and 'B' Certificate training, demonstrating leadership, discipline, teamwork, and commitment to community service through structured NCC programs and drills.

CERTIFICATIONS

BASICS OF PYTHON,

INTRODUCTION TO ARTIFICIAL INTELLIGENCE, Infosys Springboard

CYBER SECURITY, Google Cloud Skill Boost

Gen AI, Vertex AI,

SKILLS

Data Structures & Algorithms, Object-Oriented Programming, Python, Java, SQL / MySQL, LLMs, RAG, REST API Design, Flask, Docker & Kubernetes, Git & Version Control, Machine Learning

PROJECTS

Zero Risk Riders APSRTC

- Engineered an Arduino-based alcohol detection and auto-parking system integrating embedded sensors with real-time decision logic — demonstrating systems-level thinking, hardware-software integration, and automation.

Techstack: C++, Arduino UNO, circuit connection

Quantum Job Tracker Dashboard

- Developed a real-time monitoring dashboard to track and visualize job execution status on the IBM Quantum platform, applying data structures, API integration, and front-end visualization skills.

Techstack: Python, FastAPI, Qiskit, Full Stack web development

Auto-PPT Agent

- Built an AI-powered presentation generator using Python, Streamlit, LLMs, and MCP — converting natural language prompts into fully formatted PowerPoint decks with automated content generation and templating.

Techstack: Python, MCP servers, LLM

- Orchestrated end-to-end CI/CD workflows for AI model deployment, ensuring consistent quality through automated unit testing and integration checks.
- Orchestrated the deployment of the Auto-PPT Agent using Kubernetes to manage high-concurrency requests and ensure high availability of the AI generation service.

LANGUAGE

English (professional), Telugu (native), Hindi (fluent), Tamil (basic)
